mod. 50T005

Dual Probe Thermometer

Termometro elettronico a doppia sonda

Hand book of use and maintenance

Manuale d'uso e manutenzione

Thank you for choosing our product. We invite you to spend a few minutes to read the user instruction before using.

THERMOMETER TECHNICAL FEATURES

Wire lenght: 100 cm
Double probe included
The large LCD display with backlight turns off automatically.
It can be re-calibrated when needed using a simple procedure.
The internal magnet allows vertical attachment to the refrigerator or other metal elements.
The temperature hold function serves to prevent the display from changing the reading.
°F/°C switchable using a push button.
User can set high alarm temperature.
Resolution: 0.1°
Measurement range: -50°C-300°C (-58°F-572°F).
Measurement accuracy: ±1 °C(±2° F) al -20°C-150°C (-4 °F-302° F)
Automatic switch-off: after 10 min. of inactivity if the measured temperature is below 50°C and the changed temperature is between 2°C/4°F

USER INSTRUCTION

Before using the thermometer, please pill-off the protected film from the front panel.
The unit comes with two probes, one is built-in rotation probe, the other is wire probe with plug. To start the measurement, unfold the rotation probe from its housing or plug the wire probe into the socket on side of unit body, the LCD will immediately display the temperature. (The unit only read one kind of temperature, when plug the wire probe, the thermometer only read the temperature of wire probe and the LCD will display "OUT".)
The default display units are Fahrenheit. If you like to read in Celsius, please hold down the C/F key for 2s
Data lock: before removing the probe from the food, press the 'HOLD' button so that the temperature will remain in the display until the button is pressed again.
To calibrate the temperature, use the ice water method. Prepare a cup of ice water, insert the probe into the ice water making sure the probe touches the ice.
Use a cup of cold water and ice to calibrate the temperature. Insert the probe into the cup, making sure the tip touches the ice. Wait for the temperature to drop and the value on the display to stabilise. Press and hold the 'CAL' button for 5 seconds, after which the display will first flash 'CAL' then the temperature value. Press the "C/F" button to increase the value or press the "HOLD" button to decrease the value to 0°C (32° F).

The digit will continue flashing for 8 seconds; when the digit stops flashing, calibration is finished. Do not remove the probe when the digit is flashing, otherwise an accuracy error will occur.
To turn on the backlight, press the light icon button once, press again to turn it off. In addition, the backlight turns off automatically after 10 seconds of inactivity.
To set the maximum temperature alarm, press the "alarm set" button once, when the digit flashes, press the "C/F" button to increase the value or press the "HOLD" button to decrease the value, when the setting is complete, press the "alarm set" button again to confirm and return to normal.
If the temperature measurement exceeds the reset temperature, the thermometer will beep and the "alarm set" digit will flash. The beep will automatically turn off after one minute, but the 'alarm set' digit will continue to flash until the temperature falls below the reset temperature or the thermometer turns off. The user can interrupt the alarm by pressing any button. To deactivate the alarm function, simply adjust the temperature to the highest level.

WARNINGS AND PRECAUTIONS!

DO NOT LEAVE THE THERMOMETER IN THE OVEN DURING COOKING.
DO NOT TOUCH THE HOT PROBE WITH BARE HANDS;
WASH THE METAL PROBLE IN SOAPY WATER;
STERILISE THE METAL PROBE BY PLACING IT IN BOILING WATER FOR SEVERAL MINUTES;
CLEAN THE THERMOMETER WITH A DAMP CLOTH, DO NOT WASH IT WITH WATER OR IMMERSE IT IN WATER.
